

# ASSEMBLY DRAWINGS

To obtain correct overall height of wood underbody, mount #1021 spacer blocks between #1020 end blocks and #1001/1002/1003 car floors on BOX AND AUTO CARS. All reefer cars have spacer block INSIDE.

NOTE: Lionel type dummy couplers, as furnished, are cast for a very tight fit. To insure smooth operation, the inside mating contours must have some metal removed (about 1/32") to allow free play between couplers, vertically and horizontally.
